1 Introduction

This article describes the AT Commands Set used in Dragino LoRa® products, it covers below products:

- ➤ LM502
- LM502-Demo-Board

1.1 How to connect device and send AT command?

See <u>LM502 user manual</u> for detail of hardware connection and software settings.

2 General Command

2.1 +CGBR: Set baudrate

Command Type	Command Format	Response
Enquiry Command	AT+CGBR?	+CGBR= <baud></baud>
		ОК
Parameters Explain & Return	<baud>: baudrate</baud>	
Example	AT+CGBR?	
	+CGBR=9600	
	ок	
Notice		

2.2 +CJOINMODE: Set Join Method

Command Type	Command Format	Response	
Test Command	AT+CJOINMODE=?	+CJOINMODE:"mode"	
		ОК	
Enquiry Command	AT+CJOINMODE?	+CJOINMODE: <mode></mode>	
		ОК	
Execute Command	+CJOINMODE= <mode></mode>	ОК	
		or	
		+CME ERROR: <err></err>	
Parameters Explain & Return	<mode>: Join method, option:</mode>		
	0: OTAA		
	1: ABP		
	<err>: error</err>		
Example	AT+CGBR?		
	+CGBR=9600		
	ОК		
Notice	Default use OTAA to join		

2.3 +CDEVEUI: Set DevEUI

Command Type	Command Format	Response
Test Command	AT+CDEVEUI=?	+CDEVEUI= <deveui: 16="" is="" length=""></deveui:>
Enquiry Command	AT+CDEVEUI?	+CDEVEUI: <value></value>

Execute Command	+CDEVEUI= <value></value>	ОК
		or
		+CME ERROR: <err></err>
Parameters Explain & Return	<value>: DevEUI</value>	
Example	AT+CDEVEUI?	
	+CDEVEUI=AABBCCDD00112233	
	ОК	
Notice	Set or get DevEUI, 8 bytes, hex format	

2.4 +CAPPEUI: Set AppEUI

Command Type	Command Format	Response	
Test Command	AT+CAPPEUI=?	+CAPPEUI= <appeui: 16="" is="" length=""></appeui:>	
Enquiry Command	AT+CAPPEUI?	+CAPPEUI: <value></value>	
		ОК	
Execute Command	AT+CAPPEUI= <value></value>	ОК	
		Or	
		+CME ERROR: <err></err>	
Parameters Explain & Return	<value>: AppEUI</value>		
Example	AT+CAPPEUI=AABBCCDD00112233	233	
	ОК		
Notice			

2.5 +CAPPKEY: Set AppKey

Command Type	Command Format	Response
Test Command	AT+ CAPPKEY=?	+CAPPKEY= <appkey: 32="" is="" length=""></appkey:>
Enquiry Command	AT+ CAPPKEY?	+CAPPKEY: <value></value>
		ОК
Execute Command	AT+CAPPKEY= <value></value>	ОК
		Or
		+CME ERROR: <err></err>
Parameters Explain & Return	<value>: AppKey</value>	
Example	AT+CAPPKEY=AABBCCDD00112233AABBCCDD00112233	
	ОК	
Notice		

2.6 +CDEVADDR: Set DevAddr

Command Type	Command Format	Response
Test Command	AT+CDEVADDR=?	+CDEVADDR= <devaddr: 8,<="" is="" length="" td=""></devaddr:>
		Device address of ABP mode>
Enquiry Command	AT+CDEVADDR?	+CDEVADDR: <value></value>
		ОК
Execute Command	AT+CDEVADDR= <value></value>	ОК
		Or
		+CME ERROR: <err></err>
Parameters Explain & Return	<value>: DevAddr</value>	
Example	AT+CDEVADDR=00112233	
	ОК	
Notice		

2.7 +CAPPSKEY: Set AppSKey

Command Type	Command Format	Response
Test Command	AT+CAPPSKEY=?	+CAPPSKEY= <appskey: 32="" is="" length=""></appskey:>
Enquiry Command	AT+CAPPSKEY?	+CAPPSKEY: <value></value>
		ОК
Execute Command	AT+CAPPSKEY= <value></value>	ок
		or
		+CME ERROR: <err></err>
Parameters Explain & Return	<value>: AppSKey</value>	
Example	AT+CAPPSKEY=AABBCCDD00112233AABBCCDD00112233	
	ОК	
Notice		

2.8 +CNWKSKEY: Set NwkSKey

Command Type	Command Format	Response
Test Command	AT+CNWKSKEY=?	+CNWKSKEY= <nwkskey: 32="" is="" length=""></nwkskey:>
Enquiry Command	AT+CNWKSKEY?	+CNWKSKEY: <value></value>
		ОК
Execute Command	AT+CNWKSKEY= <value></value>	ок
		Or
		+CME ERROR: <err></err>
Parameters Explain & Return	<value>: Set NwkSKey</value>	
Example	AT+CNWKSKEY=AABBCCDD00112233AABBCCDD00112233	
	ОК	
Notice		

2.9 +CFREQBANDMASK: Set Channel Mask

Command Type	Command Format	Response
Test Command	AT+CFREQBANDMASK=?	+CFREQBANDMASK:"mask"
		ОК
Enquiry Command	AT+CFREQBANDMASK?	+CFREQBANDMASK: <mask></mask>
		ок
Execute Command	AT+CFREQBANDMASK= <mask></mask>	ОК
		or
		+CME ERROR: <err></err>
Parameters Explain & Return	<mask>: Set channels mask. 16 bit for 16 set of channels.</mask>	
	Example:	
	* 0001 for 0~7 channels.	
	* 0002 for 8~15 channels.	
Example	AT+CFREQBANDMASK=0001	
	ОК	
Notice	Need to set before OTAA join	

2.10 +CULDLMODE: Set uplink/downlink same frequency or different frequency

Command Type	Command Format	Response
Test Command	AT+CULDLMODE=?	+CULDLMODE:"mode"
		ок

Enquiry Command	AT+CULDLMODE?	+CULDLMODE: <mode></mode>
		ОК
Execute Command	AT+CULDLMODE= <mode></mode>	ОК
		Or
		+CME ERROR: <err></err>
Parameters Explain & Return	<mode>:</mode>	
	1: Uplink/Downlink same Frequency	
	2: Uplink/Downlink different Frequency	,
Example	AT+CULDLMODE=2	
	ОК	
Notice	Need to set before OTAA join	

2.11 +CWORKMODE: Set working mode

Command Type	Command Format	Response
Test Command	AT+CWORKMODE=?	+CWORKMODE:"mode"
		ОК
Enquiry Command	AT+CWORKMODE?	+CWORKMODE: <mode></mode>
		ОК
Execute Command	AT+CWORKMODE= <mode></mode>	ок
		or
		+CME ERROR: <err></err>
Parameters Explain & Return	<mode>: as below</mode>	
	2: normal working mode	
Example	AT+CWORKMODE=2	
	ОК	
Notice	Only support workmode =2 now.	

2.12 +CCLASS: Set Class

Command Type	Command Format	Response
Test Command	AT+CCLASS=?	+CCLASS:"class","branch","para1"," para2","para3","para4" OK
Enquiry Command	AT+CCLASS?	+CCLASS: <class></class>

Execute Command	AT+CCLASS= <class>,[branch],</class>	ок
	[para1],[para2],[para3],	or
	[para4]	+CME ERROR: <err></err>
Parameters Explain & Return	<class>:</class>	
	0: classA	
	1: classB	
	2: classC	
	The parameters number are different for differ	ent class.
	1) classA=1 and branch=0: only need para1	for set Ping slot periodicity, from 0~7,
	and the actually period is 0.96*2^periodicity(s	econds)
	2) class=1 and branch=1: para1: set beacon frequency, unit: Hz;	
	para2: set beacon DataRate,	
	para3: set ping frequency, unit: Hz;	
	para4: set ping DataRate.	
	Refer LoRaWAN specification.	
Example	AT+CCLASS=2	
	ок	
Notice	Set before join	

2.13 +CBL: check battery level

Command Type	Command Format	Response
Test Command	AT+CBL=?	+CBL:"value"
		ОК
Enquiry Command	AT+CBL?	+CBL: <value></value>
		ок
Parameters Explain & Return	<value>: battery level , according to LoRaWAN specification.</value>	
Example	AT+CBL?	
	+CBL=100	
	ОК	
Notice		_

2.14 +CSTATUS: enquiry module status

Command Type	Command Format	Response
7 1		

		www.urugino.com
Test Command	AT+CSTATUS=?	+CSTATUS:"status"
		ОК
Enquiry Command	AT+CSTATUS?	+CSTATUS: <status></status>
		ОК
Parameters Explain & Return	<status>:</status>	
	00 — no operation	
	01 — sending data	
	02 — send data fail	
	03 — send data success	
	04 — JOIN success(only valid on the first JOIN)	
	05 — JOIN Fail (only valid on the first JOIN)	
	06 — network error (Link Check result)	
	07 — send data success, no downlink	
	08 — send data success, has downlink	
Example	AT+CSTATUS?	
	+CSTATUS=03	
	ОК	
Notice		

2.15 +CJOIN: Join Network

Command Type	Command Format	Response
Test Command	AT+CJOIN=?	+CJOIN: <paraname1>,[ParaName</paraname1>
		2],[ParaName4]
		ОК
Enquiry Command	AT+CJOIN?	+CJOIN: <paravalue1>,[ParaValue2</paravalue1>
],[ParaValue4]
		ОК
Execute Command	AT+CJOIN	ОК
	= <paravalue1>,[ParaValue2],[ParaV</paravalue1>	Or
	alue4]	+CME ERROR: <err></err>
Parameters Explain & Return	<paravalue1>, [ParaValue2,[ParaValue4]:</paravalue1>	Value of Para 1~4;
	ParaValue1: Start or Stop join:	
	✓ 0 – stop JOIN	
	✓ 1 – Start Join.	
	ParaValue2: Enable or Disable Auto Join:	
	✓ 0 - Disable Auto JOIN	
	✓ 1 - Enable Auto JOIN, (Auto Enabled if in pass through mode)	

	ParaValue3: Join Period: 7~255 , unit second:
	Default: 8 seconds
	ParaValue4: Join Max tries : from 1 ~ 256
Example	AT+CJOIN=1,1,10,8(Start JOIN, Enable Auto Join, period 10s, max tries:8)
	ОК
	+CJOIN:OK
Notice	

2.16 +DTRX: Transmit and Receive data

Command Type	Command Format	Response
Test Command	AT+DTRX=?	+DTRX:[confirm],[nbtrials], <length></length>
		, <payload></payload>
		ок
Execute Command	AT+DTRX=[confirm],[nbtrials], <leng< td=""><td>OK+SEND:TX_LEN</td></leng<>	OK+SEND:TX_LEN
	th>, <payload></payload>	OK+SENT:TX_CNT
		OK+RECV:TYPE,PORT,LEN,DATA
		or
		ERR+SEND:ERR_NUM
		ERR+SENT:TX_CNT
		or
		+CME ERROR: <err></err>
Parameters Explain & Return	Confirm and nbtrials: Define send a confirm ty	pe packet or unconfirm type packet. For
	confirm type packet, module will wait for dow	nlink confirm packet from server, if fail, module
	will send uplink packet again, the max retry is i	nbtrials.
	Length: Length of sent strings, According to LoRaWAN protocol, different Data Rate may have	
	max length requirement, if data exceed limit length, server may ignore. 0 means NULL data	
	Payload: HEX format	
	Note:	
	1, How to see if uplink success	
	Confirm Type packet:	
	There will be output after each uplink.	
	OK+SEND, OK+SENT , OK+RECV.	
	Unconfirm type:	
	Each uplink will output OK+SEND,OK+SENT. If t	here is downlink from server, it will shows
	OK+RECV.	
	2. Output statuss	

OK+SEND:TX_LEN: Shows the uplink packet length OK+SENT:TX_CNT: shows the uplink packet tries. ERR+SEND:ERR_NUM: 0— Not Join 1— Busy 2— Length exceed allow limit. ERR+SENT:TX_CNT: Error after max tries OK+RECV: TYPE,PORT,LEN,DATA Get downlink TYPE: 1Byte, Bit0: 0—unconfirm, 1—confirm Bit1: 0—no ACK, 1—ACK Bit2: 0—disable, 1—enable, Indicate if the downlink data includes LINK command reply Bit3: 0—disable, 1—enable, Indicate if downlink data includes TIME info Bit4~Bit7: Default 0, Reserve PORT: 1Byte, Downlink Port LEN: 1Byte, Downlink Port		
ERR+SEND:ERR_NUM: 0— Not Join 1— Busy 2— Length exceed allow limit. ERR+SENT:TX_CNT: Error after max tries OK+RECV: TYPE,PORT,LEN,DATA Get downlink TYPE: 1Byte, Bit0: 0—unconfirm, 1—confirm Bit1: 0—no ACK, 1—ACK Bit2: 0—disable, 1—enable, Indicate if the downlink data includes LINK command reply Bit3: 0—disable, 1—enable, Indicate if downlink data includes TIME info Bit4~Bit7: Default 0, Reserve PORT: 1Byte, Downlink Port		
0— Not Join 1— Busy 2— Length exceed allow limit. ERR+SENT:TX_CNT: Error after max tries OK+RECV: TYPE,PORT,LEN,DATA Get downlink TYPE: 1Byte, Bit0: 0—unconfirm, 1—confirm Bit1: 0—no ACK, 1—ACK Bit2: 0—disable, 1—enable, Indicate if the downlink data includes LINK command reply Bit3: 0—disable, 1—enable, Indicate if downlink data includes TIME info Bit4~Bit7: Default 0, Reserve PORT: 1Byte, Downlink Port		
0— Not Join 1— Busy 2— Length exceed allow limit. ERR+SENT:TX_CNT: Error after max tries OK+RECV: TYPE,PORT,LEN,DATA Get downlink TYPE: 1Byte, Bit0: 0—unconfirm, 1—confirm Bit1: 0—no ACK, 1—ACK Bit2: 0—disable, 1—enable, Indicate if the downlink data includes LINK command reply Bit3: 0—disable, 1—enable, Indicate if downlink data includes TIME info Bit4~Bit7: Default 0, Reserve PORT: 1Byte, Downlink Port		
1— Busy 2— Length exceed allow limit. ERR+SENT:TX_CNT: Error after max tries OK+RECV: TYPE,PORT,LEN,DATA Get downlink TYPE: 1Byte, Bit0: 0—unconfirm, 1—confirm Bit1: 0—no ACK, 1—ACK Bit2: 0—disable, 1—enable, Indicate if the downlink data includes LINK command reply Bit3: 0—disable, 1—enable, Indicate if downlink data includes TIME info Bit4~Bit7: Default 0, Reserve PORT: 1Byte, Downlink Port		
2— Length exceed allow limit. ERR+SENT:TX_CNT: Error after max tries OK+RECV: TYPE,PORT,LEN,DATA Get downlink TYPE: 1Byte, Bit0: 0—unconfirm, 1—confirm Bit1: 0—no ACK, 1—ACK Bit2: 0—disable, 1—enable, Indicate if the downlink data includes LINK command reply Bit3: 0—disable, 1—enable, Indicate if downlink data includes TIME info Bit4~Bit7: Default 0, Reserve PORT: 1Byte, Downlink Port		
ERR+SENT:TX_CNT : Error after max tries OK+RECV: TYPE,PORT,LEN,DATA Get downlink TYPE: 1Byte, Bit0: 0—unconfirm, 1—confirm Bit1: 0—no ACK, 1—ACK Bit2: 0—disable, 1—enable, Indicate if the downlink data includes LINK command reply Bit3: 0—disable, 1—enable, Indicate if downlink data includes TIME info Bit4~Bit7: Default 0, Reserve PORT: 1Byte, Downlink Port		
OK+RECV: TYPE,PORT,LEN,DATA Get downlink TYPE: 1Byte, Bit0: 0—unconfirm, 1—confirm Bit1: 0—no ACK, 1—ACK Bit2: 0—disable, 1—enable, Indicate if the downlink data includes LINK command reply Bit3: 0—disable, 1—enable, Indicate if downlink data includes TIME info Bit4~Bit7: Default 0, Reserve PORT: 1Byte, Downlink Port		
TYPE: 1Byte, Bit0: 0—unconfirm, 1—confirm Bit1: 0—no ACK, 1—ACK Bit2: 0—disable, 1—enable, Indicate if the downlink data includes LINK command reply Bit3: 0—disable, 1—enable, Indicate if downlink data includes TIME info Bit4~Bit7: Default 0, Reserve PORT: 1Byte, Downlink Port		
TYPE: 1Byte, Bit0: 0—unconfirm, 1—confirm Bit1: 0—no ACK, 1—ACK Bit2: 0—disable, 1—enable, Indicate if the downlink data includes LINK command reply Bit3: 0—disable, 1—enable, Indicate if downlink data includes TIME info Bit4~Bit7: Default 0, Reserve PORT: 1Byte, Downlink Port		
Bit0: 0—unconfirm, 1—confirm Bit1: 0—no ACK, 1—ACK Bit2: 0—disable, 1—enable, Indicate if the downlink data includes LINK command reply Bit3: 0—disable, 1—enable, Indicate if downlink data includes TIME info Bit4~Bit7: Default 0, Reserve PORT: 1Byte, Downlink Port		
Bit1: 0—no ACK, 1—ACK Bit2: 0—disable, 1—enable, Indicate if the downlink data includes LINK command reply Bit3: 0—disable, 1—enable, Indicate if downlink data includes TIME info Bit4~Bit7: Default 0, Reserve PORT: 1Byte, Downlink Port		
Bit2: 0—disable, 1—enable, Indicate if the downlink data includes LINK command reply Bit3: 0—disable, 1—enable, Indicate if downlink data includes TIME info Bit4~Bit7: Default 0, Reserve PORT: 1Byte, Downlink Port		
Bit3: 0—disable, 1—enable, Indicate if downlink data includes TIME info Bit4~Bit7: Default 0, Reserve PORT: 1Byte, Downlink Port		
Bit4~Bit7: Default 0, Reserve PORT: 1Byte, Downlink Port		
PORT: 1Byte, Downlink Port	Bit3: 0—disable, 1—enable, Indicate if downlink data includes TIME info	
LEN: 1Byte, Downlink data length		
DATA:nByte, Downlink data, this field is empty if LEN=0		
Example AT+DTRX=1,2,10,0123456789		
OK+SEND:03		
OK+SENT:01		
OK+RECV:02,01,00		
Confirm data transmit successful, server will receive the payload		
"0123456789", End node receive downlink confirm.		
Notice This command is available after Joined network successful.		

2.17 +DRX: Receive Data

Command Type	Command Format	Response
Test Command	AT+DRX=?	+DRX: <length>,<payload></payload></length>
		ОК
Enquiry Command	AT+DRX?	+DRX: <length>,<payload></payload></length>
		ОК
		Or
		+CME ERROR: <err></err>
Parameters Explain & Return	Return:	

	www.aragmo.com
	Length: Data Length;
	Payload: HEX format string;
	OK: Get data normally.
Example	AT+DRX?
	ОК
Notice	This command will get data from receive buffer and clear it

2.18 +CCONFIRM: Set uplink transmit type

Command Type	Command Format	Response
Test Command	AT+CCONFIRM=?	+CCONFIRM:"value"
		ОК
Enquiry Command	AT+CCONFIRM?	+CCONFIRM: <value></value>
		ОК
Execute Command	AT+CCONFIRM= <value></value>	ОК
		Or
		+CME ERROR: <err></err>
Parameters Explain & Return	<value>:</value>	
	0: Unconfirmed up message	
	1: Confirmed up message	
Example	AT+CCONFIRM=1	
	ОК	
Notice	Need to set before uplink	

2.19 +CAPPPORT: Set uplink port

Command Type	Command Format	Response
Test Command	AT+CAPPPORT=?	+CAPPPORT:"value"
		ОК
Enquiry Command	AT+CAPPPORT?	+CAPPPORT: <value></value>
		ОК
Execute Command	AT+CAPPPORT= <value></value>	ОК
		Or
		+CME ERROR: <err></err>
Parameters Explain & Return	<value>:</value>	

	www.aragme.com
	Uplink port in DEC format. Range: 1~223;
Example	AT+CAPPPORT=10
	OK
Notice	Need to set before uplink

2.20 +CDATARATE: Set data rate

Command Type	Command Format	Response
Test Command	AT+CDATARATE=?	+CDATARATE:"value"
		ОК
Enquiry Command	AT+CDATARATE?	+CDATARATE: <value></value>
		ОК
Execute Command	AT+CDATARATE= <value></value>	ОК
		Or
		+CME ERROR: <err></err>
Parameters Explain & Return	<value>: 如下。</value>	
	Data Rate, default is 3: 0—SF12,BW125 1—SF11,BW125	
	2—SF10,BW125	
	3—SF9,BW125	
	4—SF8,BW125	
	5—SF7,BW125	
Example	AT+CDATARATE=1	
	ОК	
Notice	Need to set before uplink, if set ADR=1 this setting will be ignored.	

2.21 +CRSSI: Enquiry signal strength

Command Type	Command Format	Response
Test Command	AT+CRSSI=?	+CRSSI
		ОК
Enquiry Command	AT+CRSSI? FREQBANDIDX?	+CRSSI:
		0: <channel 0="" rssi=""></channel>
		1: <channel 1="" rssi=""></channel>
		15: <channel 8="" rssi=""></channel>
		ок

_	www.urugmo.com
Parameters Explain & Return	<freqbandidx>:</freqbandidx>
	Return the RSSI for the 8 channels in the frequency bands
Example	AT+CRSSI 1?
	+CRSSI:
	0:-157
	1:-157
	2:-157
	3:-157
	4:-157
	5:-157
	6:-157
	7:-157
	ОК
Notice	

2.22 +CNBTRIALS: Set uplink retries

Command Type	Command Format	Response	
Test Command	AT+CNBTRIALS=?	+CNBTRIALS:"MType", "value"	
		ок	
Enquiry Command	AT+CNBTRIALS?	+CNBTRIALS: <mtype>, <value></value></mtype>	
		ок	
Execute Command	AT+CNBTRIALS= <mtype>, <value></value></mtype>	ок	
		Or	
		+CME ERROR: <err></err>	
Parameters Explain & Return	<mtype>: 0: unconfirm, 1: confirm</mtype>		
	<value>: Max retries : 1~15.</value>		
Example	AT+CNBTRIALS=1,2		
	ок		
Notice	Need to set before uplink		

2.23 +CRM: Set uplink mode

Command Type	Command Format	Response
Test Command	AT+CRM=?	+CRM: "reportMode", "reportInterval"
		ОК
Enquiry Command	AT+CRM?	+CRM: <reportmode>,[reportInterval]</reportmode>
		ок
Execute Command	AT+CRM= <reportmode>,[reportI</reportmode>	OK

				www.aragino.com	
	nterval]			Or	
				+CME ERROR: <err></err>	
Parameters Explain & Return	This command is used for testing purpose.				
	<reportmode>:</reportmode>				
	0- un-periodically uplink data.				
	1- periodically uplink data;	1- periodically uplink data;			
	<reportinterval>: valid who</reportinterval>	<reportinterval>: valid when reportMode=1;Unlink Interval, unit: s。</reportinterval>			
	For different DR, the allowed minimum periodically is different, as below				
	DR\Interval(s)\Level	LV1	LV2		
	DR0	150	300		
	DR1	75	150		
	DR2	35	70		
	DR3	15	30		
	DR4	10	20		
	DR5	5	10		
Example	AT+CRM=1,10				
	ОК				
Notice	Need to set before uplink				

2.24 +CTXP: Set Transmit Power

Command Type	Command Format	Response
Test Command	AT+CTXP=?	+CTXP: "value"
		ок
Enquiry Command	AT+CTXP?	+CTXP: <value></value>
		ок
Execute Command	AT+CTXP= <value></value>	ОК
		Or
		+CME ERROR: <err></err>
Parameters Explain & Return	<value>: Output power, default is 0</value>	
	For CN470A, the value is:	
	0 - 17dBm	
	1 - 15dBm	
	2 - 13dBm	
	3 - 11dBm	
	4 - 9dBm	
	5 - 7dBm	
	6 - 5dBm	
	7 - 3dBm	

Example	AT+CTXP=1 OK
Notice	Need to set before uplink

2.25 ++CLINKCHECK: Check network connection

Command Type	Command Format	Response
Test Command	AT+CLINKCHECK=?	+CLINKCHECK:"value"
		ОК
Execute Command	AT+CLINKCHECK= <value></value>	ОК
		or
		+CME ERROR: <err></err>
Parameters Explain & Return	<value>: Link Check parameter</value>	
	0 – Disable Link Check	
	1 - Execute one Link Check	
	2 — Module carry Link Check command for	r every uplink data
	Return OK for config ok	
	If X1=1, it will wait for a while to get the reply, Format is as below.	
	+CLINKCHECK:Y0, Y1, Y2, Y3, Y4	
	Y0, means the Link Check result:	
	0 – Means this Link Check ok	
	none 0 – Means this Link Check fail	
	Y1: DemodMargin	
	Y2: NbGateways	
	Y3:Downlink RSSI	
	Y4: Downlink SNR	
Example	AT+CLINKCHECK=1	
	ОК	
	+CLINKCHECK: 0, 0, 1, -68, 8	
Notice	Need to set before uplink	

2.26 +CADRL: Enable / Disable ADR

Command Type	Command Format	Response
Test Command	AT+CADR=?	+CADR: "value"
		ОК
Enquiry Command	AT+CADR?	+CADR: <value></value>

_		age.ce
		ОК
Execute Command	AT+CADR= <value></value>	ОК
		或者
		+CME ERROR: <err></err>
Parameters Explain & Return	<value>:</value>	
	0 – ADR Disable	
	1 – ADR Enable	
Example	AT+CADR=1	
	ОК	
Notice	Need to set before uplink. Default ADR is ena	able.

2.27 +CRXP: Set RX window parameter

Command Type	Command Format	Response
Test Command	AT+CRXP=?	+CRXP:"RX1DRoffest","RX2DataRate",
		"RX2Frequency"
		ОК
Enquiry Command	AT+CRXP?	+CRXP: <rx1droffest>,<rx2datarate< td=""></rx2datarate<></rx1droffest>
		>, <rx2frequency></rx2frequency>
		ОК
Execute Command	AT+CRXP= <rx1droffest>,<rx2dat< td=""><td>ОК</td></rx2dat<></rx1droffest>	ОК
	aRate>, <rx2frequency></rx2frequency>	Or
		+CME ERROR: <err></err>
Parameters Explain & Return	<rx1droffest>,<rx2datarate>,<rx2frequency>: See LoRaWAN protocol.</rx2frequency></rx2datarate></rx1droffest>	
Example	AT+CRXP=1,1,471000000	
	ок	
Notice	Need to set before uplink. Use default setting is not set.	

2.28 +CRX1DELAY: Set RX1 window delay

Command Type	Command Format	Response
Test Command	AT+CRX1DELAY=?	+CRX1DELAY: "Delay"
		ОК
Enquiry Command	AT+CRX1DELAY?	+CRX1DELAY: <delay></delay>
		ОК
Execute Command	AT+CRX1DELAY= <delay></delay>	ОК
		Or
		+CME ERROR: <err></err>

Parameters Explain & Return	Delay: How long open RX1 window after transmit, Unit :s;
Example	AT+CRX1DELAY=2
	OK
Notice	Need to set before uplink。 Use default value is not set. 。

2.29 +CSAVE: Save MAC Parameters.

Command Type	Command Format	Response
Test Command	T+CSAVE=?	+CSAVE
		ОК
Execute Command	T+CSAVE	ок
		or
		+CME ERROR: <err></err>
Parameters Explain & Return	This command save the configure parameter to EERPOM/FLASH	
	Active after AT+RESET,.	
Example	AT+CSAVE	
	ОК	
Notice	Need to save before uplink.	

2.30 +CRESTORE: Restore MAC parameters

Command Type	Command Format	Response
Test Command	AT+CRESTORE=?	+CRESTORE
		ок
Execute Command	AT+CRESTORE	ок
		or
		+CME ERROR: <err></err>
Parameters Explain & Return	Restore MAC default parameters to EERPOM/FLASH.	
Example	AT+CRESTORE	
	ОК	
Notice	Need to save before uplink.	

2.31 +CPINGSLOTINFOREQ: PingSlotInfo request

Command Type	Command Format	Response
Test Command	AT+CPINGSLOTINFOREQ=?	+CPINGSLOTINFOREQ: <periodicity></periodicity>
		ок
Enquiry Command	AT+CPINGSLOTINFOREQ?	+CPINGSLOTINFOREQ: <periodicity></periodicity>
		ок
Execute Command	AT+CPINGSLOTINFOREQ= <periodicit< td=""><td>OK</td></periodicit<>	OK

	www.ag.weree	
	у>	Or
		+CME ERROR: <err></err>
Parameters Explain & Return	Periodicity: ping slot value	
Example	AT+CPINGSLOTINFOREQ=3	
	ОК	
Notice	For ClassB	

2.32 +CADDMUTICAST: Add multiply broadcast address

Command Type	Command Format	Response
Test Command	AT+CADDMUTICAST=?	+CADDMUTICAST:"DevAddr","AppS
		Key","NwkSKey","Periodicity","Data
		rate"
		ОК
Execute Command	AT+CADDMUTICAST= <devaddr>,<a< td=""><td>ОК</td></a<></devaddr>	ОК
	ppSKey>, <nwkskey>,[Periodicity],[</nwkskey>	Or
	Datarate]	+CME ERROR: <err></err>
Parameters Explain & Return	DevAddr: Multiply broadcast address	
	AppSKey: Multiply broadcast APP Session Keyt	
	NwkSKey: Multiply broadcast network key	
	Periodicity: ping slot period	
	Datarate: DataRate	
Example	AT+CADDMUTICAST=67678d5e,5ac8e	b2016f11f19ad19d7f530592c44,
	59543069010279fa7317f85f47c46926, 2, 2	
	ОК	
Notice	Set before Join	

2.33 +CDELMUTICAST: Delete multiply broadcast address

Command Type	Command Format	Response
Test Command	AT+CDELMUTICAST=?	+CDELMUTICAST:"DevAddr"
		ОК
Execute Command	AT+CDELMUTICAST= <devaddr></devaddr>	ОК
		or
		+CME ERROR: <err></err>
Parameters Explain & Return	DevAddr: multiply broadcast address	
Example	AT+CDELMUTICAST=67678d5e	
	ОК	
Notice		

2.34 +CNUMMUTICAST: Enquiry multiply broadcast numbers.

Command Type	Command Format	Response
Test Command	AT+CNUMMUTICAST=?	+CNUMMUTICAST:"number"
		ок
Enquiry Command	AT+CNUMMUTICAST?	+CNUMMUTICAST: <number></number>
		ок
Parameters Explain & Return		
Example	AT+CNUMMUTICAST?	
	+CNUMMUTICAST:0	
	ОК	
Notice		

2.35 +IREBOOT: Reboot module

Command Type	Command Format	Response
Test Command	AT+IREBOOT=?	+IREBOOT:"Mode"
		ОК
Execute Command	AT+IREBOOT= <mode></mode>	ОК
		或者
		+CME ERROR: <err></err>
Parameters Explain & Return	<mode>:</mode>	
	0: Reboot immediately	
	1: Reboot after finish the transmit frame	
	7: Reboot to enter bootloader	
Example	AT+IREBOOT=1	
	ОК	
Notice		

2.36 +ILOGLVL: Set log level

Command Type	Command Format	Response
Test Command	AT+IREBOOT=?	+ILOGLVL: "level"
		ОК
Enquiry Command	AT+ILOGLVL?	+ILOGLVL: <level></level>
		ОК
Execute Command	AT+ILOGLVL= <level></level>	ОК
		or
		+CME ERROR: <err></err>
Parameters Explain & Return	<level>:</level>	
	0: Disable log	
	1~5: Log number , higher number output more log	

Example	AT+ILOGLVL=1
	ок
Notice	

2.37 +CLPM: Enable Low Power

Command Type	Command Format	Response
Test Command	AT+CLPM=?	+CLPM:"Mode"
		ОК
Execute Command	AT+CLPM= <mode></mode>	ок
		or
		+CME ERROR: <err></err>
Parameters Explain & Return	<mode>: Low power mode</mode>	
	1: Enter into low power mode	
Example	AT+CLPM=1	
	ОК	
Notice	For transmission high than 40kbps, UART transmit may error So AT+CLPM=0may return	
	"+CME ERROR:", In this case, use can use "00000000D0A" (Hex format) to wake up the	
	module.	

2.38 +CSLEEP: Low Power test command

Command Type	Command Format	Response
Test Command	AT+CSLEEP=?	+CSLEEP = <0, 1, 2 >
		ОК
Execute Command	AT+CSLEEP= <sleep_mode></sleep_mode>	ОК
		or
		+CME ERROR: <err></err>
Parameters Explain & Return	Deep Sleep mode operation:	
	0 - Enter DeepSleep Mode, and can be waked up by Timer after 10ms	
	1 - Enter DeepSleep Mode, and can be waked up by pull up in set_b pin	
	2 - Enter DeepSleep Mode, can be waked up by UART. Press Any key to wake up.	
Example	AT+CSLEEP=0	
	deep sleep 10000 ms!=0	
	+CSLEEP	
	ОК	
Notice		

2.39 +CMCU: Low Power test command

Command Type	Command Format	Response
Communa Type	Communa i Cimat	Response

Test Command	AT+CMCU=?	+CMCU = <0, 1, 2, 3 >
		ОК
Execute Command	AT+CMCU= <mcu_mode></mcu_mode>	ОК
		or
		+CME ERROR: <err></err>
Parameters Explain & Return	Control MCU in low power mode:	
	mcu_mode	
	0 - Only shutdown SX1262	
	1 - MCU, watchdog, Timer work,	
	2 - MCU, watchdog, Timer operate, System enter DeepSleep and wake up by set_b	
	3 - Enter into DeepSleep in every 15 s.	
Example	AT+CMCU=0	
	ОК	
Notice		

2.40 +CSTDBY: Low Power test command

Command Type	Command Format	Response
Test Command	AT+CSTDBY=?	+CRXC = <0, 1>
		ОК
Execute Command	AT+CSTDBY= <standby_mode></standby_mode>	ОК
		Or
		+CME ERROR: <err></err>
Parameters Explain & Return	SX1262 is set to standby mode, MCU is set to DeepSleep mode, and wake up by UART	
	0 - STDBY_RC	
	1 - STDBY_XOSC	
Example	AT+CSTDBY=0	
	deep sleep wait for uart	
Notice		

2.41 +CRX: RX Test Command

Command Type	Command Format	Response
Test Command	AT+CRX=?	+CRX:"Frequency","DataRate"
		ок
Execute Command	AT+CRX= <freq>,<data_rate></data_rate></freq>	ОК
		or
		+CME ERROR: <err></err>
Parameters Explain & Return	RX continues receive	
	Freq: 150000000-960000000	
	Data_rate: DR0~DR5, for SF12~SF7.	

Example	AT+CRX=470000000,0 start to recv package (freq: 470000000, dr:0)
Notice	System will be in deal while loop. Reboot if want to use other AT Command

2.42 +CTX: Transmit Test Command

Command Type	Command Format	Response
Test Command	AT+CTX=?	+CTX:"Frequency","DataRate","TxP
		ower"
		ОК
Execute Command	AT+CTX= <freq>,<data_rate>,<pwr></pwr></data_rate></freq>	ОК
		or
		+CME ERROR: <err></err>
Parameters Explain & Return	Transmit a Packet every 1 second	
	Freq: 150000000-960000000	
	Data_rate: DR0~DR5, for SF12~SF7.	
	Pwr: Output Power. 0 ~ 22.	
Example	AT+CTX=470000000,0,22	
	start to tx data(freq: 470000000, dr: 0, power: 22): 1	
Notice	System will be in deal while loop. Reboot if want to use other AT Command	

2.43 +CTXCW: Transmit Test Command

Command Type	Command Format	Response	
Test Command	AT+CTXCW=?	+CTXCW:"Frequency","TxPower",	
		"PaOpt"	
		ОК	
Execute Command	AT+CTXCW= <freq>,<pwr>,<opt></opt></pwr></freq>	ОК	
		Or	
		+CME ERROR: <err></err>	
Parameters Explain & Return	TX continuously mode.		
	Freq: 150000000-960000000		
	Pwr: Output Power : 0 ~ 22.		
	Opt: SX1262 PA Optimal setting, from0-3, default is 0:		
	0: [0x04,0x07,0x00, 0x01],		
	1: [0x03,0x04,0x00,0x01],		
	2: [0x02,0x03,0x00,0x01],		
	3:[0x02,0x02,0x00,0x01]。		
Example	AT+CTXCW=470000000,22		
	Start to txcw (freq: 470000000, powe	r: 22db, opt: 0)	

	www.aragmereem
	AT+CTXCW=470000000,22,2
	Start to txcw (freq: 470000000, power: 22db, opt: 2)
Notice	System will be in deal while loop. Reboot if want to use other AT Command
